RÉSUMÉ · 2026

Filippo *Corsini*

Freelance software developer · Computer Engineering student

Brescia, Italy github.com/00Fil

I design and build complete software, from interface to server: apps for Android, iOS, macOS, Windows and Linux, web platforms and custom tools. I follow every project from analysis to launch, with care for design, code and the people who use it every day.

EXPERIENCE AND PROJECTS

CreaCloud — 2026

Freelance developer · Platform for a tutoring centre

- Designed and built the centre's management software: families and tutors write on WhatsApp, a Gemini-based assistant records requests, changes and cancellations.
- Scheduling engine with OR-Tools CP-SAT that places the month's lessons across four levels of constraints.
- Next.js dashboard for the coordinator, with global search and approval of critical actions.

Next.js · Supabase · Python · FastAPI · Google Gemini · Docker

Relay — 2026

Personal project · Android app, Windows app and server

- Two native apps and a server sharing one protocol: clipboard, screenshots and files move between phone and computer instantly.
- Dual transport (local network and server) with de-duplication; offline fallbacks via Bluetooth, Wi-Fi Direct and a private Headscale network.
- Own design system (Canone) with glass controls and spring physics; automated builds and releases with GitHub Actions.

Kotlin · Jetpack Compose · .NET · Node.js · GitHub Actions

uniSpace · StudyCut — 2026

Personal project · Study tools

- Platform with accounts and modular tools behind a single sign-in, deployed with Docker and Caddy.
- StudyCut removes silences from recorded lectures, plays them up to 3× and transcribes them with Whisper, LaTeX formulas included.

Python · Docker · Caddy · SQLite

SERVICES

- Websites and SEO
- Cross-platform apps
- AI and integrated systems
- Full-stack web apps
- APIs and integrations
- Hosting and maintenance

EDUCATION

2026 – today

Computer Engineering

University of Brescia, bachelor's degree.

2021 – 2026

IT Technician Diploma

Technical high school, Computer Science and Telecommunications.

SKILLS

Languages — TypeScript · JavaScript · Python · Kotlin · C# · Java · C · SQL · Bash

Frontend — React · Next.js · Tailwind CSS · HTML · CSS · GSAP · Accessibility · Technical SEO

Backend and APIs — Node.js · FastAPI · REST · WebSocket · Authentication · JWT

Cross-platform apps — Android · Jetpack Compose · iOS · macOS · Swift · Windows · .NET · Linux · Flutter · Tauri

Data — PostgreSQL · Supabase · SQLite · MySQL · Redis

DevOps and cloud — Docker · Linux · Git · GitHub Actions · CI/CD · Caddy · Nginx · VPS · Dokploy

Quality — Unit and end-to-end testing · Playwright · Code review · Design pattern

Foundations — Algorithms and data structures · OOP · Networking · Operating systems · Databases

AI — Gemini · LLM · Whisper · OR-Tools CP-SAT
