RÉSUMÉ · 2026

Filippo *Corsini*

Freelance software developer · Computer Engineering student

Brescia, Italy github.com/00Fil

I design and build complete software, from interface to server: native Android and Windows apps, web platforms and custom tools. I follow every project from analysis to launch, with care for design, code and the people who use it every day.

EXPERIENCE AND PROJECTS

CreaCloud — 2026

Freelance developer · Platform for a tutoring centre

- Designed and built the centre's management software: families and tutors write on WhatsApp, a Gemini-based assistant records requests, changes and cancellations.
- Scheduling engine with OR-Tools CP-SAT that places the month's lessons across four levels of constraints.
- Next.js dashboard for the coordinator, with global search and approval of critical actions.

Next.js · Supabase · Python · FastAPI · Google Gemini · Docker

Relay — 2026

Personal project · Android app, Windows app and server

- Two native apps and a server sharing one protocol: clipboard, screenshots and files move between phone and computer instantly.
- Dual transport (local network and server) with de-duplication; offline fallbacks via Bluetooth, Wi-Fi Direct and a private Headscale network.
- Own design system (Canone) with glass controls and spring physics; automated builds and releases with GitHub Actions.

Kotlin · Jetpack Compose · .NET · Node.js · GitHub Actions

uniSpace · StudyCut — 2026

Personal project · Study tools

- Platform with accounts and modular tools behind a single sign-in, deployed with Docker and Caddy.
- StudyCut removes silences from recorded lectures, plays them up to 3× and transcribes them with Whisper, LaTeX formulas included.

Python · Docker · Caddy · SQLite

HOW I WORK

- Prototype before code
- Automated tests and builds
- Short, frequent releases
- Documentation and code handed to the client

EDUCATION

2026 – today

Computer Engineering

University of Brescia, bachelor's degree.

2026

High-school diploma

Exam project: a macOS-style desktop in PHP and MySQL telling my story, with a demo mode.

SKILLS

Native apps

Kotlin · Jetpack Compose · C# · .NET · WinUI 3

Web

TypeScript · React · Next.js · Tailwind CSS · GSAP

Servers and data

Node.js · Python · FastAPI · PostgreSQL · Supabase · SQLite · WebSocket

Shipping

Docker · Caddy · GitHub Actions · VPS · Dokploy · Headscale

AI and algorithms

Google Gemini · OR-Tools CP-SAT · Whisper
